Treatment plan: placement of a JDEvolution® implant including a connective tissue graft to increase soft tissue volume in area 2.1 / additional ceramic veneer on tooth 1.1 / zirconia crown on tooth 2.2
JDEvolution® implant placement with minimal flap extension.
A connective tissue graft was performed after the implant placement to increase soft tissue volume.
Seven months after connective tissue graft maturation and three months after the placement of the provisional restoration it is possible to observe a correct development of an esthetic emergence profile.
Frontal view before the cementation of the final restoration.
Occlusal view of the abutment tightened at 35Ncm and thereby prepared for the crown to be cemented.
Frontal view of the final restoration cemented.
