HANDS ON

PRESENTATION

More and more colleagues are asking for solutions to restore edentulous patients with fixed teeth even in cases of severe atrophy and poor quality bone. Flexibility, agility, competence. This is what it takes to **master extreme cases.**

This advanced course is aimed at those who already face full arch rehabilitations with confidence but often stop in front of the most challenging cases, especially in the **atrophic maxilla.** If you are looking for solutions this is the course for you. After this course, **you will increase your treatment options** in cases of moderate and severe bone resorption and you will be able to treat more patients with immediate full arch protocol.

I will show you how to solve your full arch cases in **one day, graftless** and with **immediate loading.**

I will teach you how to **solve 100% of your full arch cases** with **Maxilla-For-All®** treatment concept by using **pterygoid, trans-sinus and zygomatic** implants.

1st Day

Live surgery sessions

8:30am-3:30pm

Participants will have the chance to assist to complex step-by-step Live surgeries with trans sinus / pterygoid implants and also with zygomatic implants. Follow the entire workflow closely, step by step, and take your skills in the treatment of full arch to the next level.

2nd Day

Theoretical part

9:00am-1:00pm

- Anatomical limits of the original Full Arch on 4/6 treatment
- Evolution of the treatment to solve the most complex cases
- Trans sinus implants, pterygoid implants and zygomatic implants
- Operating sequences with step by step videos of surgical techniques
- Key factors for the success of the treatment
- Literature review

Hands-On Session

2:00pm-4:30pm

Each participant will have the opportunity to place trans sinus implants, pterygoid and zygomatic implants on simulators and will be able to become familiar with the components.

FINDINGS

You will be able to live the experience of a clinic with **great expertise** performing more than 4000 implants and 700 full arch immediate rehabilitations per year.

The entire **digital workflow** for both **guided surgery** and **3D prosthetic design** is developed in a modern in-house laboratory equipped with all the 3D design software and the most advanced equipment for both 3D printing and metal milling.
